

# Digital Rebuild & SEO Dominance Plan

Legacy URL preservation • Search acquisition • Authority • Conversion • Client utility

---

## Objective

**Rebuild EntireFM.com as the most useful and commercially effective mid-market facilities-management website in the UK: a platform that restores the traffic-generating strengths of the old Wix estates, expands them intelligently, and becomes useful before, during and after a client relationship.**

Prepared for: EntireFM

Date: 22 August 2026

# Executive summary

**The rebuild is not a redesign project. It is a recovery-and-expansion programme for EntireFM's search estate, commercial authority, conversion engine and client relationship layer.**

The two legacy Wix sites show why the old EntireFM website generated traffic and enquiries: it did not rely on a small set of generic corporate pages. It contained deep service coverage, sector pages, support/helpdesk content, cleaning and soft-service pages, specialist technical pages, blog content and multiple keyword-oriented location URLs. The newer Wix Studio site improved presentation and some technical-service depth, but it is materially slimmer than the older Wix estate in several areas.

The competitive review reinforces the same conclusion. Mid-market UK FM competitors are fragmented: Oltec is aggressive with location pages; Averro combines location architecture with visible software; Anabas is strong in audience-specific thought leadership; Pareto and Bellrock lean into data and technology; US operators such as City Wide and KBS combine service, sector, location and operational content at scale. No single competitor combines all of these strengths into a genuinely indispensable FM resource.

## The strategic position

- Restore every valuable historic URL on its original path and rebuild it as a genuinely useful, unique page.
- Expand beyond legacy URLs with new service, sector, location, compliance and problem-intent pages - but never at the expense of historic paths.
- Build a Knowledge Centre and Compliance Centre that answer the questions facilities and property managers search before they are ready to tender.
- Add interactive tools that convert useful advice into first-party leads: compliance checker, PPM planner, FM cost calculator, tender builder and SLA tools.
- Show service delivery technology rather than merely claiming to be 'technology enabled'.
- Use the website as a client utility layer through job reporting, documents, compliance records and operational visibility.
- Run content as an operating system: one expert article becomes search content, LinkedIn, video, newsletter, sales material and internal linking support.

## Non-negotiable migration rule

**A legacy URL is an asset until proven otherwise. Do not rename it because a new sitemap looks cleaner. Do not redirect it merely because another page has a similar keyword. Preserve the path, define its intent, improve its content, and only merge/redirect where evidence supports doing so.**

# 1. What the old Wix estates tell us

## 1.1 Older Wix site: breadth was a strength

The older Wix site carries a broad FM estate: hard services; soft services; commercial cleaning; M&E; plumbing and gas; fire and emergency systems; gates and barriers; HVAC; building fabric; vending; media displays; working at height; concierge; caretaker/janitorial; security; windows; pressure washing; grounds; landscaping; multiple cleaning sub-services; PPM; 24/7 support; helpdesk; sector pages; careers; supply-chain content; an older blog and several older post URLs.

This matters because search demand in FM is distributed. A buyer does not only search 'facilities management'. They search the specific service, compliance task, location, building type or operational problem in front of them.

## 1.2 Newer Wix Studio site: stronger technical framing, slimmer estate

The Wix Studio version concentrates more heavily on hard FM and modern technical themes - PPM, building/system inspections, drone inspections, safety-critical emergency systems, plumbing/gas, HVAC, M&E, emergency lighting, industrial cleaning and selected sector pages. It also contains a newer blog, client login and contact route.

The rebuild should therefore use the Wix Studio version as one design/content reference, but the older Wix site as a critical source of lost information architecture. The correct rebuild is the union of both estates, not a migration of only the newer one.

## 1.3 Geographic SEO was not a mistake

The legacy strategy of maintaining multiple location-intent URLs was commercially sensible. The current migration matrix also reflects paired '/fm-{city}' and '/facilities-management-{city}' pages across a wide set of cities, with London carrying an additional '/london-facilities-management' variant. These pages should remain live and be differentiated by intent rather than collapsed into one aesthetically tidy city page.

# 2. Competitor lessons to take - and what not to copy

| Competitor | Best idea                                                                           | EntireFM response                                                                                           |
|------------|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| Oltec      | Location-led SEO, broad FM/service coverage, regular operational content            | Keep location depth; out-resource them with better local proof, tools and knowledge content                 |
| Avero FM   | Clear multi-city architecture, software-led proposition, contractor/client platform | Take the visibility/control principle; avoid AI-template aesthetics, bubble icons and generic SaaS language |
| Anabas     | Strong corporate-workplace niche and buyer-relevant insight content                 | Adopt the discipline: publish around buyer problems, not company news                                       |
| Pareto     | Data, engineering, technology and future-facing FM positioning                      | Own a distinctive EntireFM intelligence territory focused on control and building performance               |

| Competitor     | Best idea                                                   | EntireFM response                                                                        |
|----------------|-------------------------------------------------------------|------------------------------------------------------------------------------------------|
| Bellrock       | Technology/IWMS story and data visibility                   | Demonstrate operational visibility publicly rather than hiding it behind claims          |
| Cleanology     | City footprint and sustainability differentiation           | Build stronger cross-linking between city, service, sector and proof                     |
| City Wide (US) | Service × sector × location × problem architecture          | Use as a model for scalable acquisition, but maintain editorial quality and UK relevance |
| KBS (US)       | National/local positioning, technology, operational insight | Use proof and client visibility to make scale feel controlled rather than anonymous      |

## 2.1 The gap EntireFM can own

**The target is not 'the best-looking FM website'. The target is the most useful FM website in the UK - with premium design wrapped around search authority, operational proof and client utility.**

## 3. EntireFM's five-engine digital model

| Engine             | Purpose                                                                                                 |
|--------------------|---------------------------------------------------------------------------------------------------------|
| Search acquisition | Capture service, location, sector, problem and decision-stage demand.                                   |
| Authority          | Become a repeat-use source for compliance, maintenance, tendering and building-management guidance.     |
| Conversion         | Match the CTA to intent - tools and guides early, FM review mid-funnel, survey/proposal at high intent. |
| Client utility     | Make EntireFM.com operationally useful after the contract is won.                                       |
| Brand              | Look and sound like a modern, substantial operator without generic AI/SaaS visual language.             |

## 4. Search architecture

### 4.1 The search estate

**SERVICE × LOCATION × SECTOR × PROBLEM × KNOWLEDGE**

EntireFM should be discoverable whether the buyer starts with a city, a technical service, a building type, a compliance question or a procurement decision. The architecture must create multiple legitimate entry points without producing doorway pages.

### 4.2 Legacy geographic pages stay exact

For high-value markets, multiple old keyword-order URLs stay live. They are differentiated by page purpose, heading architecture, local evidence, internal links, FAQs, proof and CTA.

| URL                           | Primary role                                  | Unique content angle                                                     |
|-------------------------------|-----------------------------------------------|--------------------------------------------------------------------------|
| /facilities-management-london | Primary high-commercial-intent London FM page | Full service proposition + proof + London-specific operating issues      |
| /london-facilities-management | Alternative London regional/portfolio intent  | Estate coverage, sectors, operating model, local expertise               |
| /fm-london                    | Short-form FM keyword intent                  | Outsourced/managed FM, rapid route to review or proposal                 |
| /locations/london/            | New regional hub                              | Navigation hub linking all London services, sectors, proof and resources |

### 4.3 What makes a location page genuinely local

- Commercial districts, estates, industrial corridors and surrounding service areas.
- Dominant local property types and sectors.
- Operational issues genuinely relevant to the city/region.
- Nearby case studies, testimonials and named proof where permission exists.
- Regional response model and service availability.
- City-specific FAQs and internal links.
- Original imagery and examples where possible.
- No city-name swapping or template paragraphs masquerading as local expertise.

### 4.4 New geography expansion

After legacy recovery is secured, build new high-quality hubs and landing pages for major UK commercial markets not fully represented in the old estate, including Bristol, Newcastle, Cardiff, Glasgow and Edinburgh, plus other cities justified by demand and contract fit. New pages must be evidence-led and added in controlled batches so quality remains high.

## 5. Service and sector architecture

### 5.1 Services

- Total / Integrated FM • Hard FM • Soft FM • PPM & asset management • Reactive maintenance • M&E • Electrical • HVAC
- Plumbing & gas • Fire & emergency systems • Emergency lighting • Building fabric • Inspections • Drone surveys • Working at height • Access control
- Commercial cleaning • Industrial cleaning • Window cleaning • Pressure washing • Security • Concierge • Grounds • Waste / washroom

Each primary service receives its own commercial landing page, supporting compliance/problem content, related sector pages, relevant location links, case studies and a conversion path.

### 5.2 Sectors

- Commercial offices and co-working
- Industrial and manufacturing
- Warehousing and logistics
- Retail and service stations
- Hotels, hospitality and leisure
- Residential / landmark / prime property
- Education
- Healthcare
- Aviation and transport
- Sports venues / arenas
- Construction and developments
- Multi-site property and estate management

Sector pages must describe the actual operational problem set - not generic statements about 'understanding your industry'. A logistics page, for example, should discuss loading bays, shutters, dock equipment, yard lighting, power, 24/7 shifts, industrial cleaning, asset uptime and response SLAs.

## 6. Build the EntireFM Knowledge & Compliance Centre

### 6.1 Knowledge Centre

- Complete guide to facilities management
- PPM explained
- Outsourced vs in-house FM
- How to tender an FM contract
- How to reduce reactive-maintenance cost
- How to structure an FM budget
- How to switch FM providers without operational disruption
- FM glossary with deep internal linking

## 6.2 Compliance Centre

- Fire safety and alarms
- Emergency lighting
- Electrical / EICR
- Water hygiene and Legionella
- Gas safety
- HVAC and F-Gas
- Lifts and lifting equipment
- Asbestos
- Working at height
- Building regulations and statutory inspection
- Waste and environmental compliance
- Maintenance records and audit readiness

This centre should own long-tail question intent such as testing frequency, responsibility, inspection intervals, required records and what happens when compliance is missed.

## 6.3 Interactive FM tools

| Tool                        | User value                                         | Commercial bridge      |
|-----------------------------|----------------------------------------------------|------------------------|
| Building Compliance Checker | Identifies likely gaps and upcoming checks         | Compliance review      |
| PPM Planner                 | Indicative maintenance schedule by building/assets | PPM assessment         |
| FM Cost Calculator          | Shows cost of fragmented suppliers/reactive work   | Consolidation review   |
| Tender / RFP Builder        | Structures scope, assets, SLAs and mobilisation    | Tender support         |
| SLA Builder / Benchmark     | Helps compare service expectations                 | Contract review        |
| Asset Lifecycle Calculator  | Frames repair vs replacement decisions             | Engineering assessment |

## 7. Make technology visible

EntireFM should not use 'technology-enabled' as decorative copy. The site should demonstrate the actual client-control model using a polished public demo or representative interface.

- Jobs: open, assigned, attending, completed.
- PPM: due, upcoming, overdue, completed.
- Assets: condition, history, warranty, documentation.
- Compliance: certificates, inspection dates, renewals, exceptions.
- Reporting: response, first-time fix, spend, fault trends and SLA performance.

## 7.1 Client portal end-state

- Raise and track jobs
- View PPM schedules and status
- Access asset registers
- Download compliance certificates and documents
- View SLA and performance reporting
- Approve quotations
- Access invoices / spend visibility
- Emergency support and escalation
- Site contacts and contract information

## 8. Conversion architecture

| Stage       | CTA                                                         | Purpose                                                   |
|-------------|-------------------------------------------------------------|-----------------------------------------------------------|
| Early-stage | Guide / checker / planner / newsletter                      | Capture useful first-party intent without forcing a quote |
| Mid-stage   | FM review / current-provider comparison / estate discussion | Start a consultative sales conversation                   |
| High-intent | Site survey / proposal / tender support                     | Move directly into opportunity creation                   |
| Client      | Portal / report issue / documents / support                 | Increase retention and operational stickiness             |

## 9. Content, social and distribution engine

Content should be predominantly useful to facilities, property and operations decision-makers. Company news remains valid, but it should not dominate the public feed.

| Format           | Example                                                         | Primary channel                         |
|------------------|-----------------------------------------------------------------|-----------------------------------------|
| Evergreen search | How often should commercial HVAC be serviced?                   | Google / knowledge centre               |
| Insight          | Why reactive maintenance costs spiral across multi-site estates | LinkedIn / newsletter / sales           |
| Current affairs  | Regulatory or standards changes                                 | Email / LinkedIn / compliance centre    |
| Practical        | 10 checks before winter                                         | Search / save / share                   |
| Opinion          | Why the cheapest FM tender is often not the cheapest contract   | Leadership / commercial differentiation |
| Video            | Engineer Explains / Before It Breaks / Site Walk / 60 Second FM | LinkedIn / YouTube / social             |

## 9.1 Monthly email

**EntireFM Building Brief: 3 compliance changes • 3 maintenance insights • 1 cost-saving idea • 1 useful FM tool.**

# 10. Legacy URL preservation and migration control

## 10.1 Migration rule set

| Status                   | When                        | Action                                                                           |
|--------------------------|-----------------------------|----------------------------------------------------------------------------------|
| KEEP / REBUILD 200       | Default                     | Keep exact path and rebuild as unique, useful page.                              |
| KEEP 200 + change intent | Near-duplicate legacy paths | Retain URL but give it a differentiated purpose.                                 |
| 301 MERGE                | Exception only              | Use only where evidence shows no unique value and a stronger destination exists. |
| 410                      | Rare exception              | Only for truly invalid/unsafe/non-content URLs with no search or user value.     |
| NEW                      | Expansion                   | Create new pages after legacy recovery; do not replace historic paths.           |

## 10.2 Mandatory pre-launch migration workflow

1. Export all URLs from both Wix site managers / URL redirects / CMS collections where available.
2. Export historical Google Search Console landing pages and queries for the maximum available period.
3. Crawl both live Wix preview estates and the current EntireFM site; include orphaned URLs found from internal links and XML sitemaps.
4. Merge with analytics landing-page history, backlink targets and any historic sitemap files.
5. Create one canonical Legacy URL Registry with status, target intent, title/H1, canonical, internal links and redirect rule.
6. Build and QA every KEEP/REBUILD URL before launch.
7. Run a pre-launch route test against the registry: every legacy URL must return the planned status code and correct content.
8. After launch, monitor 404s, Search Console Pages, crawl stats, rankings and inbound links daily during the initial migration window.

## 10.3 Important audit limitation

The registry in this report includes all URLs discoverable from the two live Wix navigation structures, their visible blog archives/posts, the known legacy geographic URL matrix and currently surfaced migration

routes. Wix's XML sitemap endpoint was not parseable through the available browser interface during this review. Therefore, true orphan-page completeness must be verified with the Wix URL/site-manager export and historical Search Console data before launch. This is a release gate, not an optional follow-up.

## 11. Delivery roadmap

| Phase                   | Scope                                                                                                          |
|-------------------------|----------------------------------------------------------------------------------------------------------------|
| Phase 0 - Recovery lock | Freeze URL changes; complete registry; identify historic traffic/backlinks; define 200 vs 301 rules.           |
| Phase 1 - Core rebuild  | Homepage, services, sectors, company/trust, core conversion, all legacy service/sector URLs.                   |
| Phase 2 - Geo recovery  | All legacy city variants rebuilt uniquely; city hubs; local proof; internal-link matrix.                       |
| Phase 3 - Authority     | Knowledge Centre, Compliance Centre, glossary, 20-30 priority evergreen resources.                             |
| Phase 4 - Utility       | Compliance checker, PPM planner, cost tool, tender assistant, technology demo.                                 |
| Phase 5 - Client layer  | Client portal, documents, job/service visibility, reporting and support routes.                                |
| Phase 6 - Growth loop   | New locations, new service/location combinations, case studies, editorial calendar, competitor gap monitoring. |

### 11.1 First 90 days after launch

- Protect migration: zero unmanaged legacy 404s.
- Re-submit sitemaps and inspect high-value legacy URLs in Search Console.
- Track the priority city/service keyword set weekly.
- Publish at least one substantial expert resource per week.
- Publish practical LinkedIn content 3-5 times per week, with real operational visuals where possible.
- Launch the Building Brief email and first lead-magnet tool.
- Add proof continuously: case studies, metrics, site imagery, client outcomes and certifications.

## 12. What success looks like

| Area      | KPI                       | Target direction                                 |
|-----------|---------------------------|--------------------------------------------------|
| Migration | Legacy URL coverage       | 100% registry coverage; no accidental 404s       |
| SEO       | Non-brand organic clicks  | Recover historic baseline, then sustained growth |
| SEO       | Top-10 city/service terms | Growing share across priority cities             |

| Area       | KPI                             | Target direction                                    |
|------------|---------------------------------|-----------------------------------------------------|
| Authority  | Knowledge/compliance entrances  | Increasing share of organic landing sessions        |
| Conversion | Qualified enquiry rate          | Track by landing-page intent and source             |
| Tools      | Tool completion → lead          | Measure first-party conversion by tool              |
| Content    | Assisted conversions            | Content should influence pipeline, not just traffic |
| Client     | Portal adoption / repeat visits | Website becomes operational, not brochure-only      |

## Appendix A - Legacy URL Registry

All paths below are to be evaluated as exact EntireFM.com routes. Duplicate paths that existed on both Wix versions require one strengthened page, not two separate pages. The default action is 200 + unique rebuild.

### A1. Core / utility

| Exact legacy path                   | Source estate    | Defined role                              | Default action     |
|-------------------------------------|------------------|-------------------------------------------|--------------------|
| /                                   | Both Wix estates | Core corporate/home intent                | KEEP / REBUILD 200 |
| /about-entire-facilities-management | Both             | About / company story                     | KEEP / REBUILD 200 |
| /contact-us                         | Wix Studio       | Contact / enquiry                         | KEEP / REBUILD 200 |
| /facilities-management-services     | Older Wix        | Master services overview                  | KEEP / REBUILD 200 |
| /hard-services                      | Both             | Hard FM overview                          | KEEP / REBUILD 200 |
| /soft-services                      | Older Wix        | Soft FM overview                          | KEEP / REBUILD 200 |
| /cleaning-services                  | Older Wix        | Commercial cleaning overview              | KEEP / REBUILD 200 |
| /ppm                                | Both             | Planned preventative maintenance          | KEEP / REBUILD 200 |
| /24-7-fm-support                    | Older Wix        | 24/7 FM support                           | KEEP / REBUILD 200 |
| /helpdesk                           | Older Wix        | Helpdesk / reactive support               | KEEP / REBUILD 200 |
| /client-login                       | Wix Studio       | Client access / portal gateway            | KEEP / REBUILD 200 |
| /job-board                          | Older Wix        | Careers / vacancies                       | KEEP / REBUILD 200 |
| /fm-supply-chain                    | Older Wix        | Supplier / supply-chain participation     | KEEP / REBUILD 200 |
| /portfolio                          | Older Wix        | Historic service-delivery / project proof | KEEP / REBUILD 200 |
| /privacy-policy                     | Both             | Privacy                                   | KEEP / REBUILD 200 |

| Exact legacy path                    | Source estate | Defined role                                                            | Default action     |
|--------------------------------------|---------------|-------------------------------------------------------------------------|--------------------|
| /copy-of-what-is-facilities-manageme | Older Wix     | Legacy odd slug - retain and assign unique consultancy/education intent | KEEP / REBUILD 200 |

## A2. Hard / technical services

## Appendix C - Sources reviewed

Primary legacy estates reviewed on 22 August 2026:

- <https://petercurrey.wixstudio.com/efmsut17724>
- <https://petercurrey.wixsite.com/efm-new>
- <https://www.entirefm.com/sitemap> (used to cross-check the current migration/geographic matrix)

Competitor sources used in this strategy include:

- <https://www.oltecgroupp.com/locations>
- <https://avero.fm/>
- <https://anabas.co.uk/news-insights/>
- <https://paretofm.com/>
- <https://www.bellrockgroup.co.uk/>
- <https://cleanology.com/>
- <https://gocitywide.com/>
- <https://www.kbs-services.com/>

This document is a strategic rebuild plan, not a substitute for the final pre-launch technical crawl. The release gate remains: reconcile this registry against Wix exports, Google Search Console, analytics and backlink targets before changing DNS or production routing.
